Case Study for

“ Sagari have practically freed up one of staff again overnight. We had lots of critical data on many servers which we were backing up manually on an external hard drive every day. This was very time consuming and we had no way to know this data would be successfully restored. Sagari spent the time to learn how our business operates to ensure they could deliver and Backup solution that would help us in both a minor and major disaster. I feel confident we made the right choice and feel confident knowing Sagari are looking after our backups. ”

*Andy Haffenden,
Managing Director
- Stratum Five Ltd*

Stratum Five is a complete turnkey telematic solution provider supplying GPS tracking, alerting and monitoring hardware to all sectors of the maritime market worldwide.

Stratum Five required a Backup and Disaster Recovery Solution to ensure their business was safe in the event of a disaster as they currently had no real strategy or plan in place.

We evaluated the amount of data which was required to be backed up, the amount of data which is created each day, the current broadband they had in place and the amount of time they could realistically be down for. From here we could decide if Stratum Five's bandwidth was sufficient to deliver an off-site solution as part of their DR Strategy.

From our talks with key staff and the Operations Director we had our budgets and constraints we could work to. This allowed us to procure and implement an on-site solution which would ensure in a minor disaster we could restore their server and key workstations within the hour.

The off-site solution we put in place meant in a major disaster we could easily bring down the data from one of the vaults to complete a full restore of their Server and key workstations within 3 hours ensuring Stratum Five would be operational again.

Stratum Five have 3 hosted servers which are client facing servers that have no current support or maintenance in place. This flagged up many problems because of the importance of these servers running 24/7 365 and the lack of access to these servers directly if a problem occurs.

We spoke directly with their hosting companies to put in a failover solution which would switch over instantly in the event of a disaster so their clients would never know there was a problem. This would keep Stratum Five customers happy and would give Stratum Fives current suppliers the time to resolve any issues.

Sagari are now looking after Stratum Five's backup and DR on a monthly fixed price plan and are looking to manage their servers and workstations in the near future.
